

# POST-STORM GARDEN CARE

# WHAT YOU CAN DO NOW...

- Assess Damage.
- Safely Clear Debris.
- Determine which plants can be saved by looking at the root system. If majority of roots are still intact, the plant can be replanted. Apply root stimulator or MicroLife Ocean Harvest.
- Incorporate native plants for erosion control.
- Re-use what you can. Tree logs can be used as garden bed borders, bug hotels, or shredded for mulch.
